

We are a family run business with over 140 years' experience with a reputation for supplying high quality feeds.

We continually invest in all aspects of the business building on the solid foundations laid in the 1870's by Edward Massey Jnr.

Every day we are trusted by our customers to help them achieve the aims for their business. We care about what we do - we invest in our team and in the latest technology to ensure we satisfy the most rigorous standards of quality control and provide the very best service.

Massey Feeds is a progressive company and continues to achieve a high standard of skill and quality for producing feeds with a broad range of expertise and knowledge to ensure they contain the best nutrition available while recognising our responsibility to the environment.

GAME FEED RANGE

www.masseyfeeds.co.uk
www.harperfeeds.co.uk

MASSEY COUNTY GAME FEEDS have been formulated to meet the specific requirements of breeding and growing game birds. The feeds are manufactured using only the highest quality raw materials which contain highly digestible proteins, cereals and cereal by-products, all with a high nutrient density. Following our feeding programmes will help to ensure the best results from your game breeding and rearing units.

Feeding Notes

Massey Game Breeder diets should be fed from four weeks prior to the onset of laying. Provide adequate space and cover for nesting birds to avoid bullying and ensure maximum egg production. Ensure there is adequate hopper space (minimum 1 hopper per 15 hens) and allow for a minimum 200ml daily water intake per hen during the breeding season. Do not feed grain during the laying period as this will dilute the daily intake of vitamins and other micronutrients which will lead to poor egg production and hatchability. Insoluble grit can however be offered.

Game Starter feeds are available in a choice of two protein levels and two crumb sizes which can then be followed by a mini pellet to encourage maximum intake and rapid growth. Brooder areas should be prepared at least a day in advance of placing chicks. Fresh clean water should be provided in shallow drinkers that are cleaned regularly and feed offered on trays or flat surfaces in a well lit position.

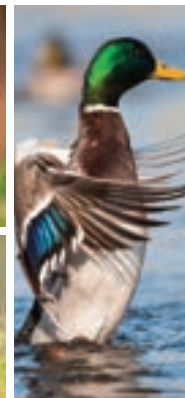

Game Grower diets are formulated to take the birds through from four weeks to release. The diets contain the optimum balance of protein and micronutrients to ensure good release weights, correct development and good feathering.

Poult Release Pellets are designed to help poults adjust to life in the wild – grain can be added later.

Game Maintenance Pellets are the ideal overwinter feed to prevent excess weight gain and control the amount of fat being laid down. Some grain can also be fed in conjunction with Game Maintenance Pellets.

These feeding recommendations are intended as a guide and account must be taken of the prevailing conditions at the time. Weather, time of year, feeding methods and unavoidable wastage as well as the quality of land and amount of insect life will all affect feeding rates.

Feed	size mm	protein %	Pheasant feed guide per 1000 birds
GAME PRE-BREEDER PELLETS	3.0	16.5	80 bags/month
GAME BREEDER PELLETS	3.0	18	80 bags/month
GAME BREEDER 20	3.0	20	80 bags/month
GAME SUPERFINE CRUMB*✓		29	1 bag as initial feed Partridge for 2/3 weeks
GAME STARTER CRUMB*✓		28	8 bags for up to 2 weeks Partridge for up to 3 weeks
